

GLACIERS

Answer:

1. What is the nickname for a glacier?
2. What continent are they on?
3. How fast do they move?
4. How do they shape landscape?
5. What is the reason of downhill movement?
6. Why is a glacier dirty?
7. How long does it take to form a glacier?
8. What machine are they similar to?
9. How do we call the process when the pieces of rock are taken by a glacier?
10. What happened when ice starts to melt?

Organize:

- As the glacier flows downhill it takes these loose pieces with it.
- Ice turns into water and flows downhill to join the lake.
- Snow accumulates and the pressure changes snow into ice.
- We can see icebergs to fall into the water.
- The weight and gravity cause the glacier move downhill.
- Water beneath the glacier soaks into cracks and as the water freezes it breaks the rock into small pieces.

translate:

glacier
landscape
reason
movement
to be similar to
to melt
to flow
loose
piece

to turn into
to join
pressure
iceberg
weight
beneath
to soak
crack
to freeze
